The purpose of the our project

The main objective of our project is to make lives better. And we are Connecting people and everything around them with an invisible line to form the Internet of Things. It is an extension and expansion of the network based on the Internet. It is a huge network formed by combining various information-sensing devices with the network. It realises the interconnection of people, machines, and things in their house wherever they are, whenever they want.

Requirements

- Temperature sensor
- Humidity sensor
- Gas sensor (Carbon Monoxide sensor, Formaldehyde sensor)
- Infrared sensor (Human body sensing door, lamp, curtain, opening and closing of electrical equipment with infrared switch)
- Device with Reliable Internet Connection
- Web Browser
- HTML , PHP
- DBMS(NaviCat), My SQL
- Apache Services

Scope of Our Project

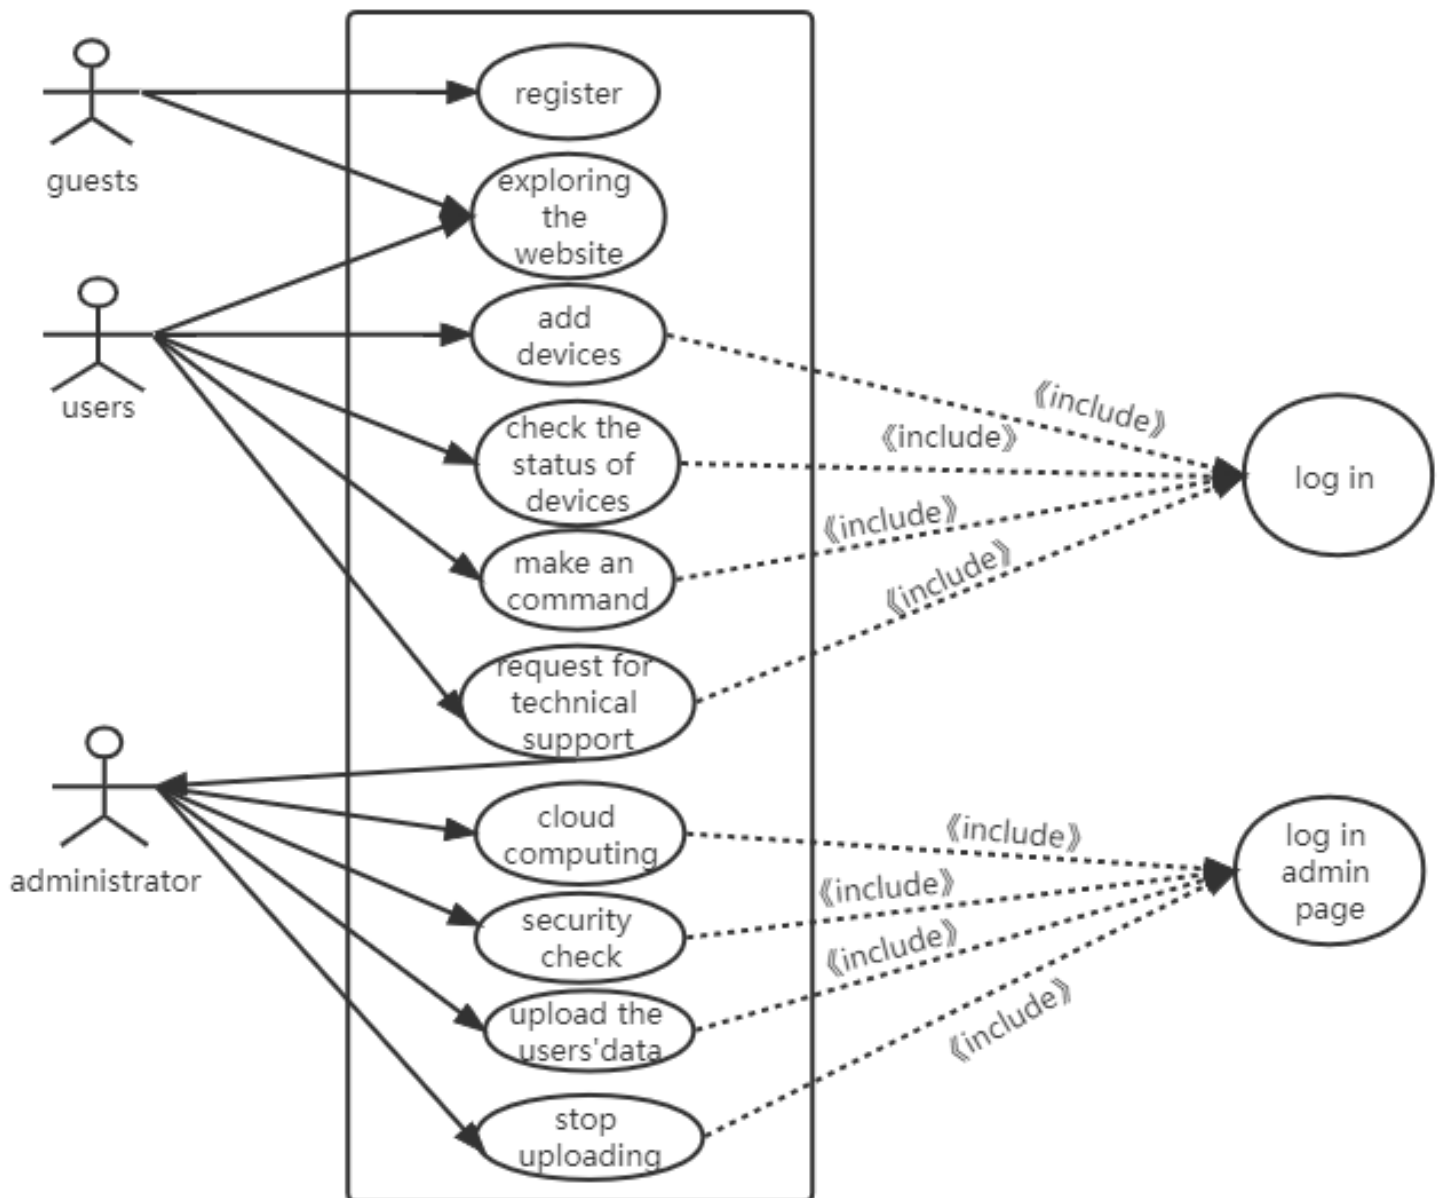

- We can take control of every device you have with a single device.
- With robust AI, all your task has been automated and helps in time management.
- Your privacy is well protected with a secured infrastructure.
- Well designed and reliable website.

List of features

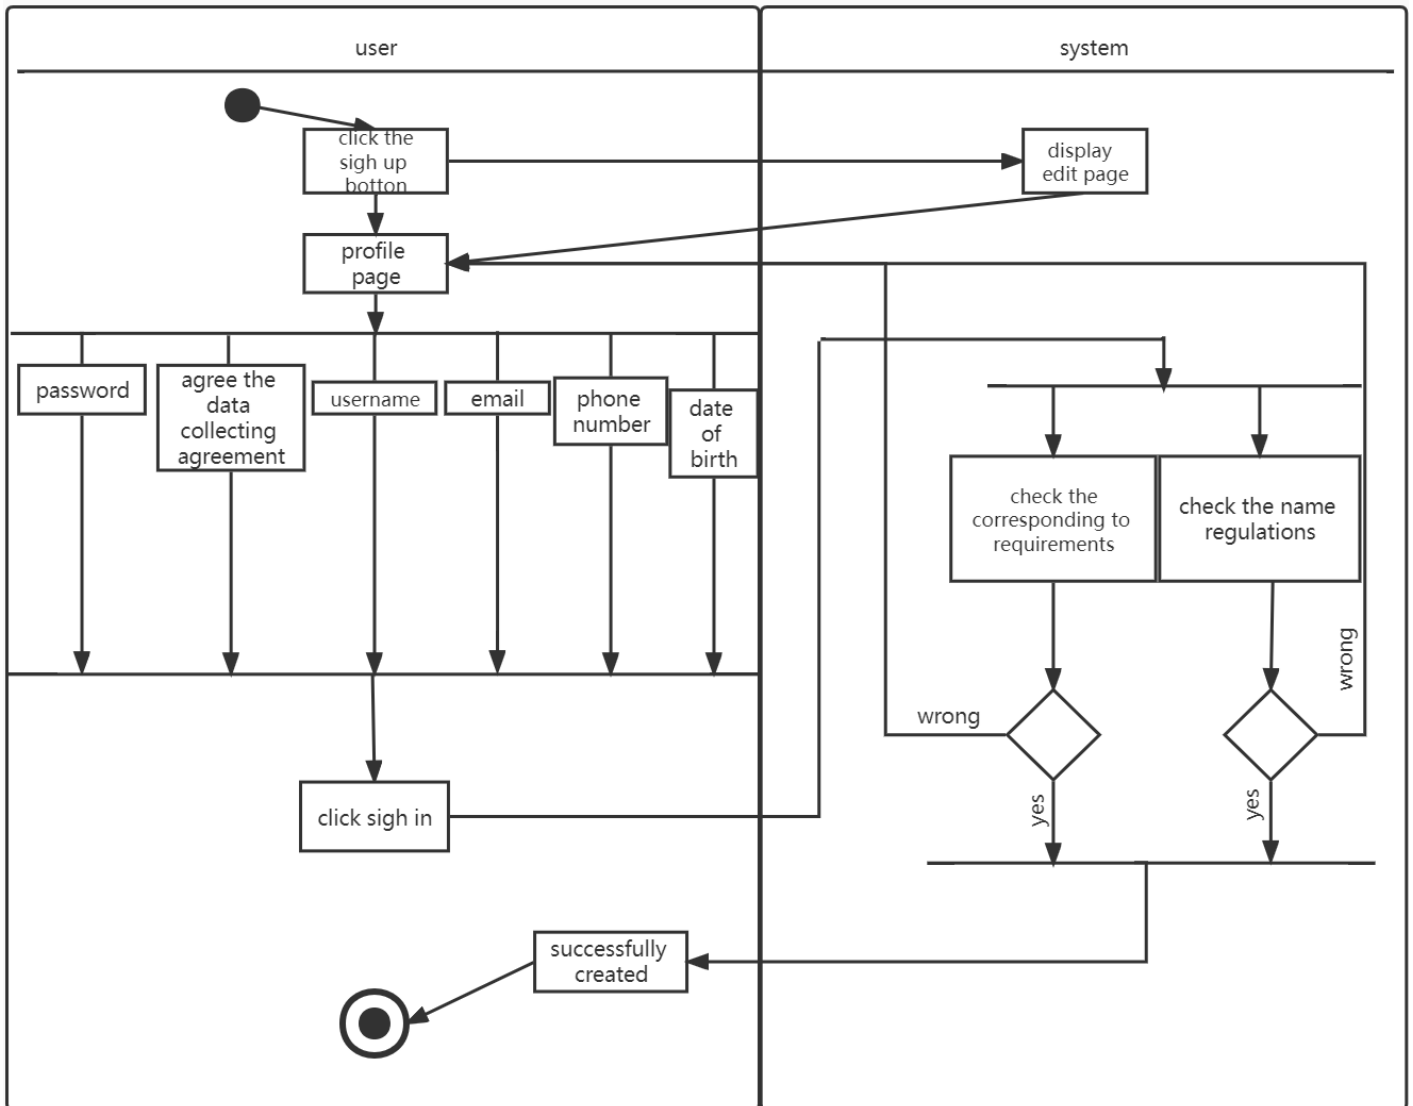

- Log in page
- Register page
- Dashboard page
- Device page : They can add new devices.
- Situation page : User can create a list of commands to be binned to a single button
- Historical page : All activities performed are displayed
- Support page
- Admin page for developer
- User Profile Page

Navigation Diagram

Definition Of Data

- Climatic Data

We collect the climatic data from users to know about their surrounding temperature and humidity level and suggest them solutions according.

- Environmental Data

We collect environmental data like Carbon Monoxide level and Formaldehyde level, also we collect the data of their movement using an infrared sensor to activate or deactivate a function.

- Geolocation Data

Geolocation data refers to any kind of data that allows for determining, with reasonable precision, the location of any person or object on planet Earth.

- Their usual routine

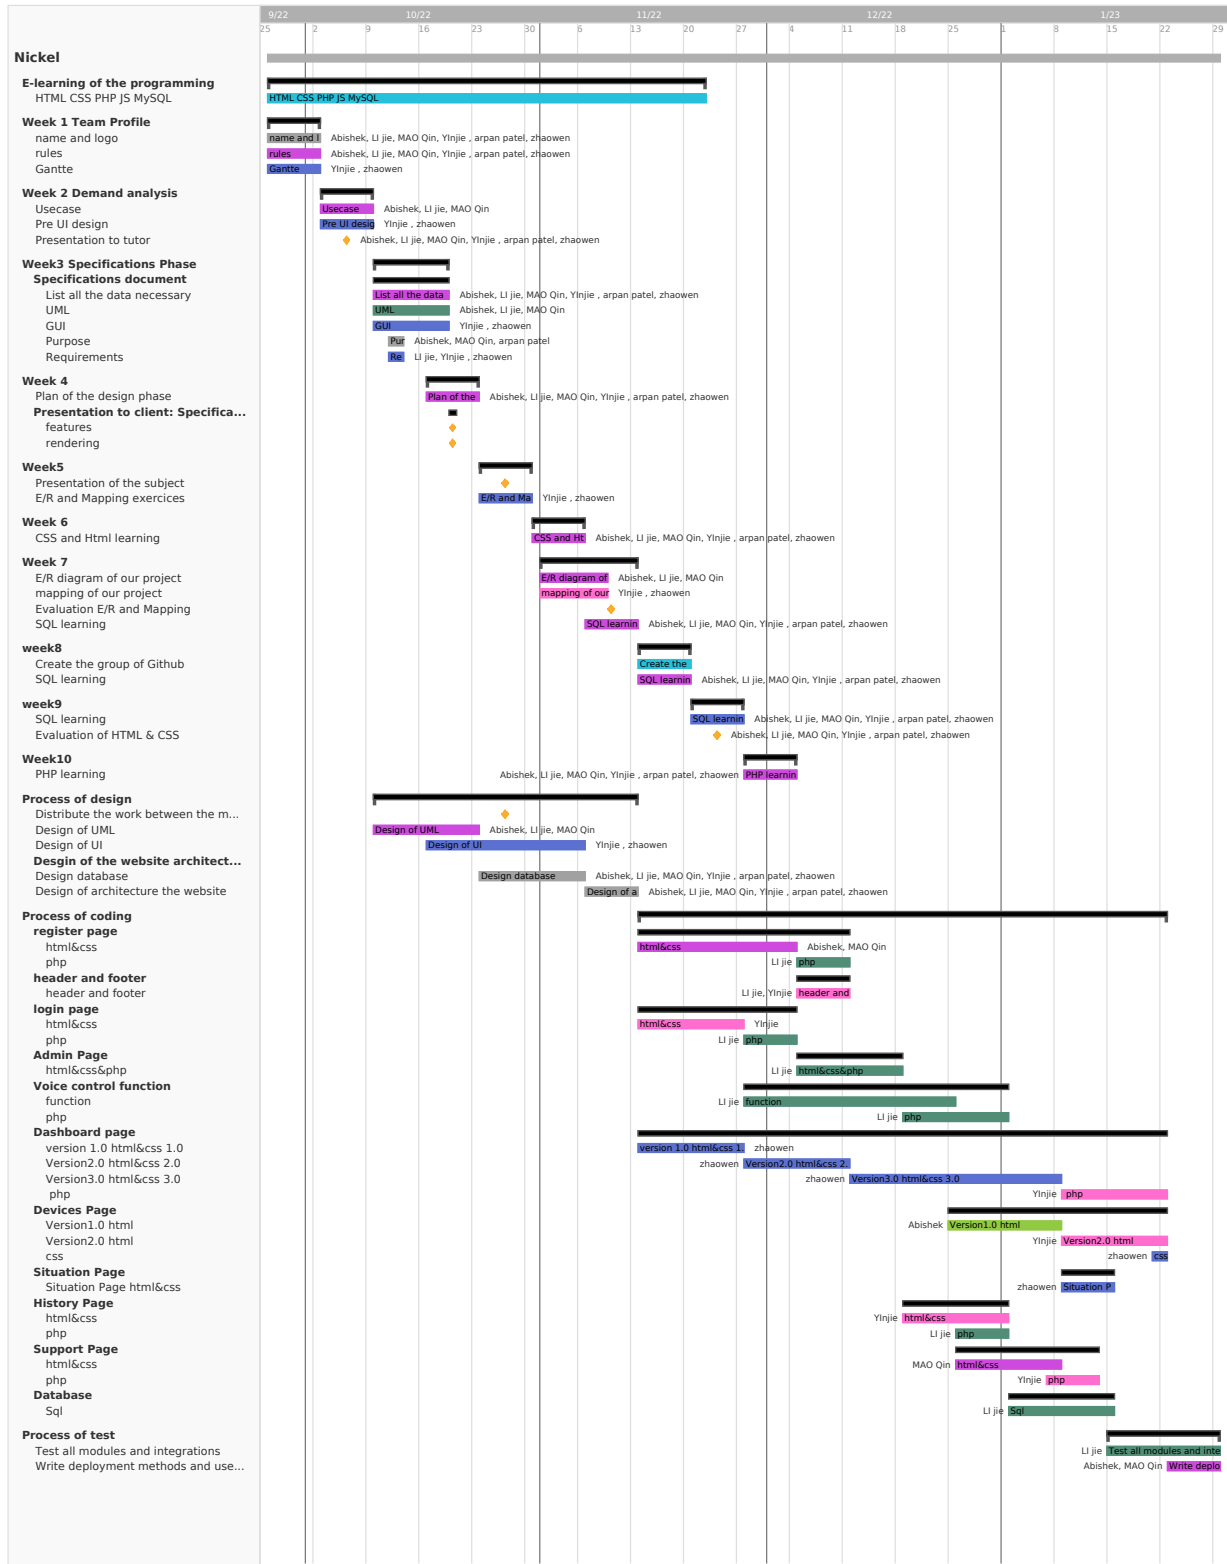

We collect data on their daily routine in order to automate the process in the future.

- Users Usage Data

All the data of their usage has been collected and later feed into AI, to create a robust AI.
